

Atomic Whois Explorer

Quick Intro

Atomic Whois Explorer is designed to search through global WHOIS database to extract owners' personal data. Current version of the program is capable of retrieving all contact e-mail addresses and expiration dates. What is whois database? It is a storage place of registration information about owners of the Internet domains. For example, searching whois data for www.google.com from whois.networksolution.com gives you the following results:

Registrant:

```
Google Inc. (DOM-258879)
2400 E. Bayshore Pkwy
Mountain View CA 94043
US
```

Domain Name: google.com

```
Registrar Name: Alldomains.com
Registrar Whois: whois.alldomains.com
Registrar Homepage: http://www.alldomains.com
```

Administrative Contact:

```
DNS Admin (NIC-1340142) Google Inc.
2400 E. Bayshore Pkwy
Mountain View CA 94043
US
dns-admin@google.com
+1.6503300100
Fax- +1.6506181499
```

Technical Contact, Zone Contact:

```
DNS Admin (NIC-1340144) Google Inc.
2400 E. Bayshore Pkwy
Mountain View CA 94043
US
dns-admin@google.com
+1.6503300100
Fax- +1.6506181499
```

```
Created on.....: 1997-Sep-15.
Expires on.....: 2011-Sep-14.
Record last updated on..: 2003-Apr-07 10:42:46.
```

Domain servers in listed order:

```
NS3.GOOGLE.COM      216.239.36.10
NS4.GOOGLE.COM      216.239.38.10
NS1.GOOGLE.COM      216.239.32.10
NS2.GOOGLE.COM      216.239.34.10
```

Which things are of most interest? They are *administrative contact* and *expiration date*. The first one contains domain owner data (person or company name), such as phone/fax number and e-mail address. *2011-Sep-14* is a date when this domain (google.com) will expire, making it available for anyone to register (but I'm sure this time will never come. ;-)

Though, you may download a simple whois.exe program and make whois-request manually, this will waste a lot of your valuable time. Using Atomic Whois Explorer automates this process. Moreover, multithread mode available in this program let the users explore domains with an impressive speed - several hundreds a minute! **Just imagine how many hours it saves you!**

When your search is completed and you see a list of domain owners' addresses, Atomic Whois Explorer suggests you to save them into a file or MS Excel/Word application.

How to start

Atomic Whois Explorer requires you to load a list of domain names, before starting data gathering. To create a new list, choose menu item **File/Open** to load or import the existing list or **Edit/Paste** to paste the list from the Windows Clipboard. The program can also parse the links and e-mail addresses and extract the domain names from them.

When the list is loaded you can edit it using right-button mouse pop-up menu. There are some editing commands there.

Click a toolbar button or choose menu item Explore/Start to start data extraction.

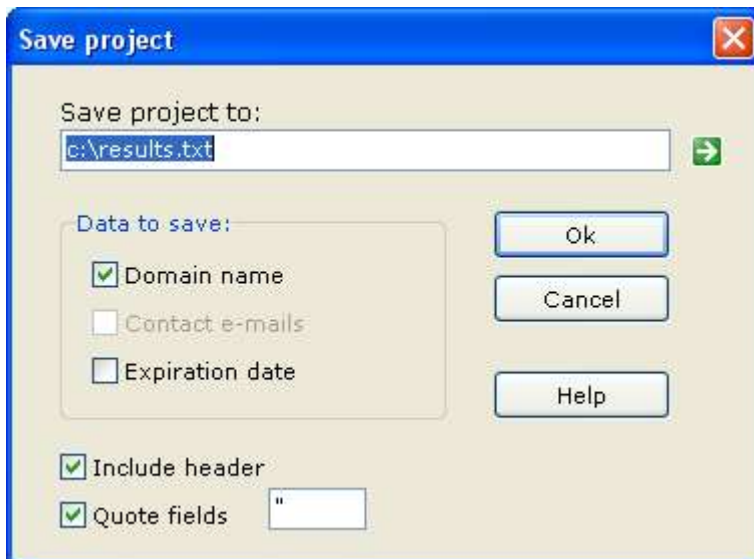

Save addresses

Once you have processed some domain names and got new e-mail addresses you need save them. Atomic Whois Explorer provides you four different ways:

- saving to a text file;
- copying to Windows Clipboard;
- exporting to MS Word;
- exporting to MS Excel

To save the addresses, choose menu item **Results** and then click on any submenu item. Exporting to MS Word/Excel is a very simple operation, just choose this menu item and all listed e-mail addresses will be automatically transferred to the desired Office application. When copying to Clipboard, all listed e-mail addresses will be copied to the Clipboard buffer so that you will able to paste them to anywhere.

Results / Save to file opens a new window where you may select some custom options.

In this window you may enter a file name to save found e-mail addresses to. In addition, resulting file may contain domain names and expiration dates. All this is selected in "Data to save" group box. **Include header** option let you choose whether the file will contain a header description data saved or not (the header is a one line at the top of the file). If **Quote fields** is checked, then all data (domain name, e-mail addresses and expiration dates) will be saved with quote marks.

Note: unregistered trial version does not allow the user to save the results!

Common Settings

Common settings page

Number of threads is a number of simultaneously executed extraction processes. Having a decent Internet connection and fast computer you may increase this number significantly. The maximum number of threads is 999

The check box **Use Log** tells if the program should store the logs of the connections. Check it if you need resolve some problems. The logs are available for each domain separately when you double click on a domain in the list.

Timeout shows how long AWE will wait the proxy server response. The default and recommended value is 5000.

The group **Stop Whois requests when found** defines a rule when AWE should stop send whois-requests to different servers (if any). For example, *.com* zone now has 6 different whois servers. AWE knows all of them. by default, it tries to connect to the most important server and receive any information from it. If nothing found there then it automatically connects to another server. If first server returned only expiration date, but did not return e-mail address and country information then request to another server will not sent until you change a rule in **Stop Whois requests when found** group.

Proxy settings page

Here you should enter your Proxy servers details if desired to use it. You may use Socks 4/4A/5 or HTTP proxy servers.

Filter settings page

Some domain owners do not leave their valid e-mail addresses but use fake ones like non@available.org or null@null.com. Whenever you enter such e-mail addresses in this window AWE will not export them (but they will shown in the main window).

Rotate Proxy page

If **Use Rotate Prixy List** is checked then Atomic Whois Explorer uses not one proxy server to connect but a list of them. You can add as many server as you need in the list. Use right mouse button to add, edit or delete the servers.

Download AWE

The latest version of Atomic Whois Explorer can be downloaded freely from our web site. The permanent location of the distribution package is: <http://www.massmailsoftware.com/d/awe.exe>.

Also you can visit [our site with bulk email software](#) to get the downloadable versions of our email processing software, including the Atomic Mail Sender, [the best bulk mailer](#) available on the net and priced so low anyone can afford it. Please note, having registered version of AWE you have a 30% discount for buying Atomic Mail Sender, just let us know if you are interested.

Contact us!

E-mail:

Feel free to contact us by e-mail at awe@massmailsoftware.com. We are always happy to answer your questions so you can get the most out of our software.

Phone:

We do not offer phone support. We respond promptly to all emails received and feel this allows us to give you the best service and most complete answers to your questions.

Why should I register AWE?

For many people, the biggest reason to register is to remove the program restrictions and get rid of the nag screen, which pops up at the most inconvenient times. For example, the unregistered version of Atomic Whois Explorer does not allow you to save the extracted e-mail addresses.

Also, registration entitles you to receive technical support with higher priority and minor upgrades to the software for free. Registration may also entitle you to discounts on new software releases from [AtomPark Software](#). We will also send you updates and announcements by email to let you know about what's happening with our products.

Finally, by registering the software, you provide us with the resources and incentive to improve the software with updates, which you receive for free, and to develop additional quality products in the future.

Register Atomic Whois Explorer

The current version of **Atomic Whois Explorer** is distributed under a "free to try" license. That means you may download a trial version for evaluation. The trial version has some features locked. If you wish to purchase the program for unrestricted use, the cost is \$29.85 USD. You will be sent a code to register the software through email.

Online purchase

To buy Atomic Whois Explorer on-line please follow the link below:
